
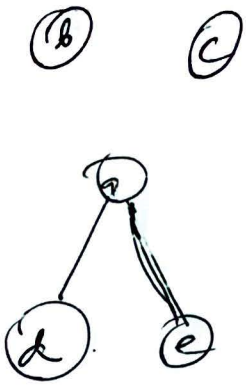
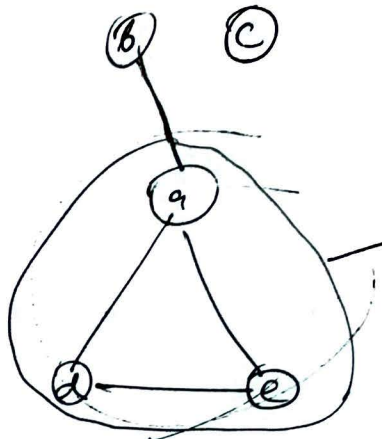
$t=1$

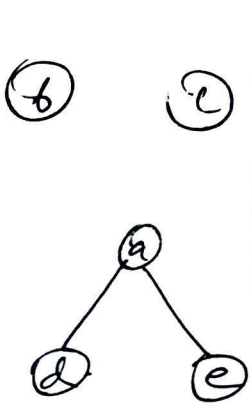


$t=2$

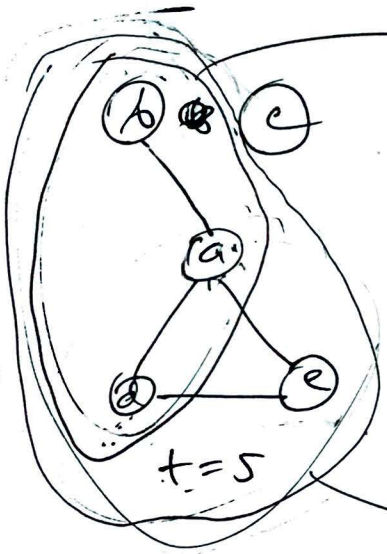


$t=3$

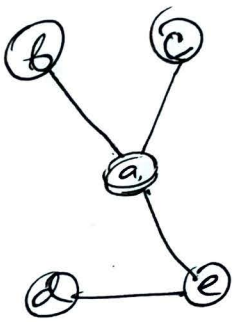
(2, 3) - periodic subgraph with support seq. [1, 3, 5]



$t=4$



$t=5$



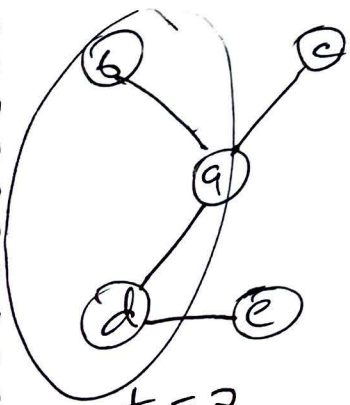
$t=6$

(2, 3) - periodic subgraph with support seq [5, 7, 9]

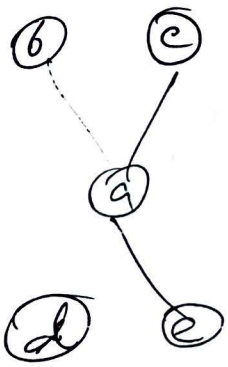
overlapping subgraph

ratio ≥ θ% common genes vertices and at least one common timepoint

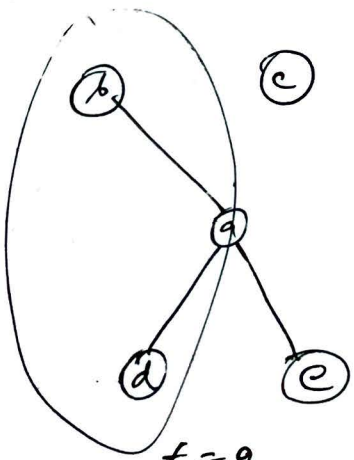
~~overlapping subgraph~~:



$t=7$



$t=8$



$t=9$

$$\theta = \frac{\#\text{common genes}}{\max(S_1, S_2)}$$
